ABSTRACT

There has been a continuous countywide growth in the Spanish-speaking school population. By September 1969, the total number was 46,552, i.e. 30,140 Cuban refugee pupils, and 16,412 from countries in South and Central America, Mexico, and Puerto Rico. From 10.5 percent of total school membership in 1965, the number reported by the schools increased to 13.5 percent in 1967 and 19.1 percent in 1969. An analysis of Attendance Department records reveals that much of the increase in the Spanish-speaking segment of the school population has been the result of improved reporting by the schools from year to year and the use of a more specific definition of "Spanish-speaking" pupils in the 1969 survey. Nevertheless, there has been considerable growth. Special instructional programs have grown in response to their unique educational needs. Almost 20 percent are participating in classes in English as a second language; almost one-third are participating in a program designed to maintain or develop the language skills in their native language. This year some 90 schools are offering one or both of these programs. (Author/JM)

Spanish-speaking Pupils in the Dade County Public Schools

From the 1965-66 school year through 1968-69 surveys were made annually by the Office of Bilingual Education to obtain the statistical information needed to plan effective language programs for those pupils whose parents are Spanish-speaking or whose native language is Spanish. Traditionally the pupils themselves have been called "Spanish-speaking" although many are native Americans and therefore American citizens; many have never used the Spanish language. However, because of custom and for simplicity in referring to them, the term "Spanish-speaking pupils" is used in this report also.

In order to eliminate duplication of effort and to coordinate this survey with the annual "Fall Elementary and Secondary School Survey" required by the U. S. Office for Civil Rights, responsibility for the survey of Spanish-speaking pupils was assumed by the Administrative Research Department in September 1969. The data for September 1969 found in Table 2 of this report are the same as the data shown under "Spanish language origin" in Tables 1, 2 and 3, Administrative Research Report No. 3, 1969-70, "Desegregation, September 1969" which were taken from the "Fall Elementary and Secondary School Survey" mentioned above. Additional data for all three reports were obtained at the same time.

Compilation of the data and comparison with data from previous surveys indicates a continuous countywide growth in the Spanish-speaking school population. By September 1969 the total number was 46,552. Of this number, 30,140 were Cuban refugee pupils; the other 16,412 came from countries in South and Central America, Mexico and Puerto Rico. From 10.5 percent of total school membership in 1965, the number reported by the schools increased to 13.5 percent in 1967 and 19.1 percent in 1969. (See Table 1.)

On October 1, 1965, two days before the renewal of the influx of Cuban refugees in the Miami area, there were 21,288 Spanish-speaking pupils reported in Dade County public schools. By October 1966, the Spanish-speaking membership reported had increased to 24,328; by October 1967, the number of native speakers of Spanish in the public schools had reached 29,320; by October 1968 the count was 35,990; and by September 1969 the present number, 46,552, was reported.

It would appear from these data that the growth of the Spanish-speaking segment of the school population has been accelerating. An analysis of Attendance Department records of Cuban refugee pupils revealed, however, that annual increases have varied within a limited range and could not have accounted for such large increases as were reported. Since there has not been a conspicuous inmigration of non-Cuban refugee Spanish-speaking pupils, it is evident that much of the increase reflected by the data has been the result of improved reporting by the schools from year to year and the use of a more specific definition of "Spanish-speaking" pupils used in the 1969 survey. This does not mean that the large number reported for September 1969 is inflated; rather, that not all such pupils were reported in earlier surveys. There has been considerable growth nevertheless.

There has been growth also in the two special instructional programs which were developed to meet the unique curricular needs of the Spanish-speaking pupils. For the 20.0 percent (9,315) of the Spanish-speaking pupils who are so limited in their control of English that they need special instruction, classes in English as a second language (English-SL) are provided. Almost one-third (31.4 percent or 14,630) of the Spanish-speaking pupils in the school system are participating in the second special area, Spanish-S, a program designed to maintain or develop the language skills in their native language. This year some 90 schools are offering one or both of these programs. (See Tables 3, 4 and 5.)

In addition to the regular staff members who teach either English-SL or Spanish-S, there are special personnel allocations of teachers, aides, visiting teacher counselors, and psychological caseworkers who work with the Spanish-speaking pupils. The special allocation is made to enable the schools to meet the instructional and psychological needs of these pupils without detracting from the programs offered to English-speaking pupils. Table 6 shows that, of the regular teaching staff, 214 were in the English program and 101 were in the Spanish program; it shows 45 ESL specialists and 227 Cuban aides provided by special allocation and assigned to certain schools. In addition there were 20 visiting teacher counselors and six psychological caseworkers who serve several schools each.

The data presented in this report show that the number of schools with a significant Spanish-speaking membership is growing. Consequently there has been considerable expansion of the special programs to meet the needs of this segment of the pupil population. These programs will be established in even more schools as the Spanish-speaking pupil population reaches the levels already attained in almost 40 percent of the schools in the public school system.
